

DESIGNED not only to look good, but to cope with extensive use in difficult conditions for many years, RIBs in this range offer a larger working deck area and a greater variety of deck configurations than our narrower vessels. All models are available with cabin, cuddy or console, with the option of twin or V-berth, sea heads or commercial workspace and equipment stowage. All configurations allow for easy access forward via the side deck.

THE SPACIOUS DECK provides a stable platform and allows for easy crew and equipment transport and transfers at sea. Coupled with the impressive load capacity of 2600kg (10m model), these RIBs are ideally suited to chase boat and commercial applications.

MANUFACTURED using only Lloyd's approved GRP materials, vessels in this range are capable of MCA coding (to Category 2 dependent upon specification).

“ Great boat. Built extremely well and exactly fit for purpose ”

OUR 10M SERIES RIBs are designed, manufactured and assembled at our workshops on the Isle Of Wight. We work with every customer to ensure that the build options are correctly specified to the customer's intended application. An extensive range of features are included as standard.
