

THE ISLAND 10M is a high-performance utility RIB adaptable to a wide range of uses from chase boat or commercial applications to the serious recreational customer wanting to explore further afield. The exceptionally sea-kind, efficient hull and outstanding range make it ideally suited to those looking for a RIB that can take them further, faster, while remaining dry and comfortable.

THE SPACIOUS DECK provides a stable platform and allows for easy crew and equipment transport and transfers at sea. 10m series RIBs can be manufactured with a generous console cuddy fitted with single or V berth, sea heads and space for equipment stowage.

MANUFACTURED to rigorous standards in a process controlled, low waste environment, Island 10m RIBs are built with durability and reliability in mind. RIBs in this range can be MCA coded to CAT 2 and are fully independently verified for conformity to the RCD. This process provides external validation of the safety and environmental compliance of the vessel.

“ Great boat. Built extremely well and exactly fit for purpose ”

ISLAND 10M RIBS are designed, manufactured and assembled at our workshops on the Isle of Wight.

AN EXTENSIVE RANGE of features are included as standard.
